

*ReliaWind & Supergen Wind  
EWEC2010 Side Event*

# **Towards the Offshore Wind Power Station**

**Prof Peter Tavner**

**School of Engineering and Computing Sciences**

**Durham University**

## ■ ReliaWind, EU FP7

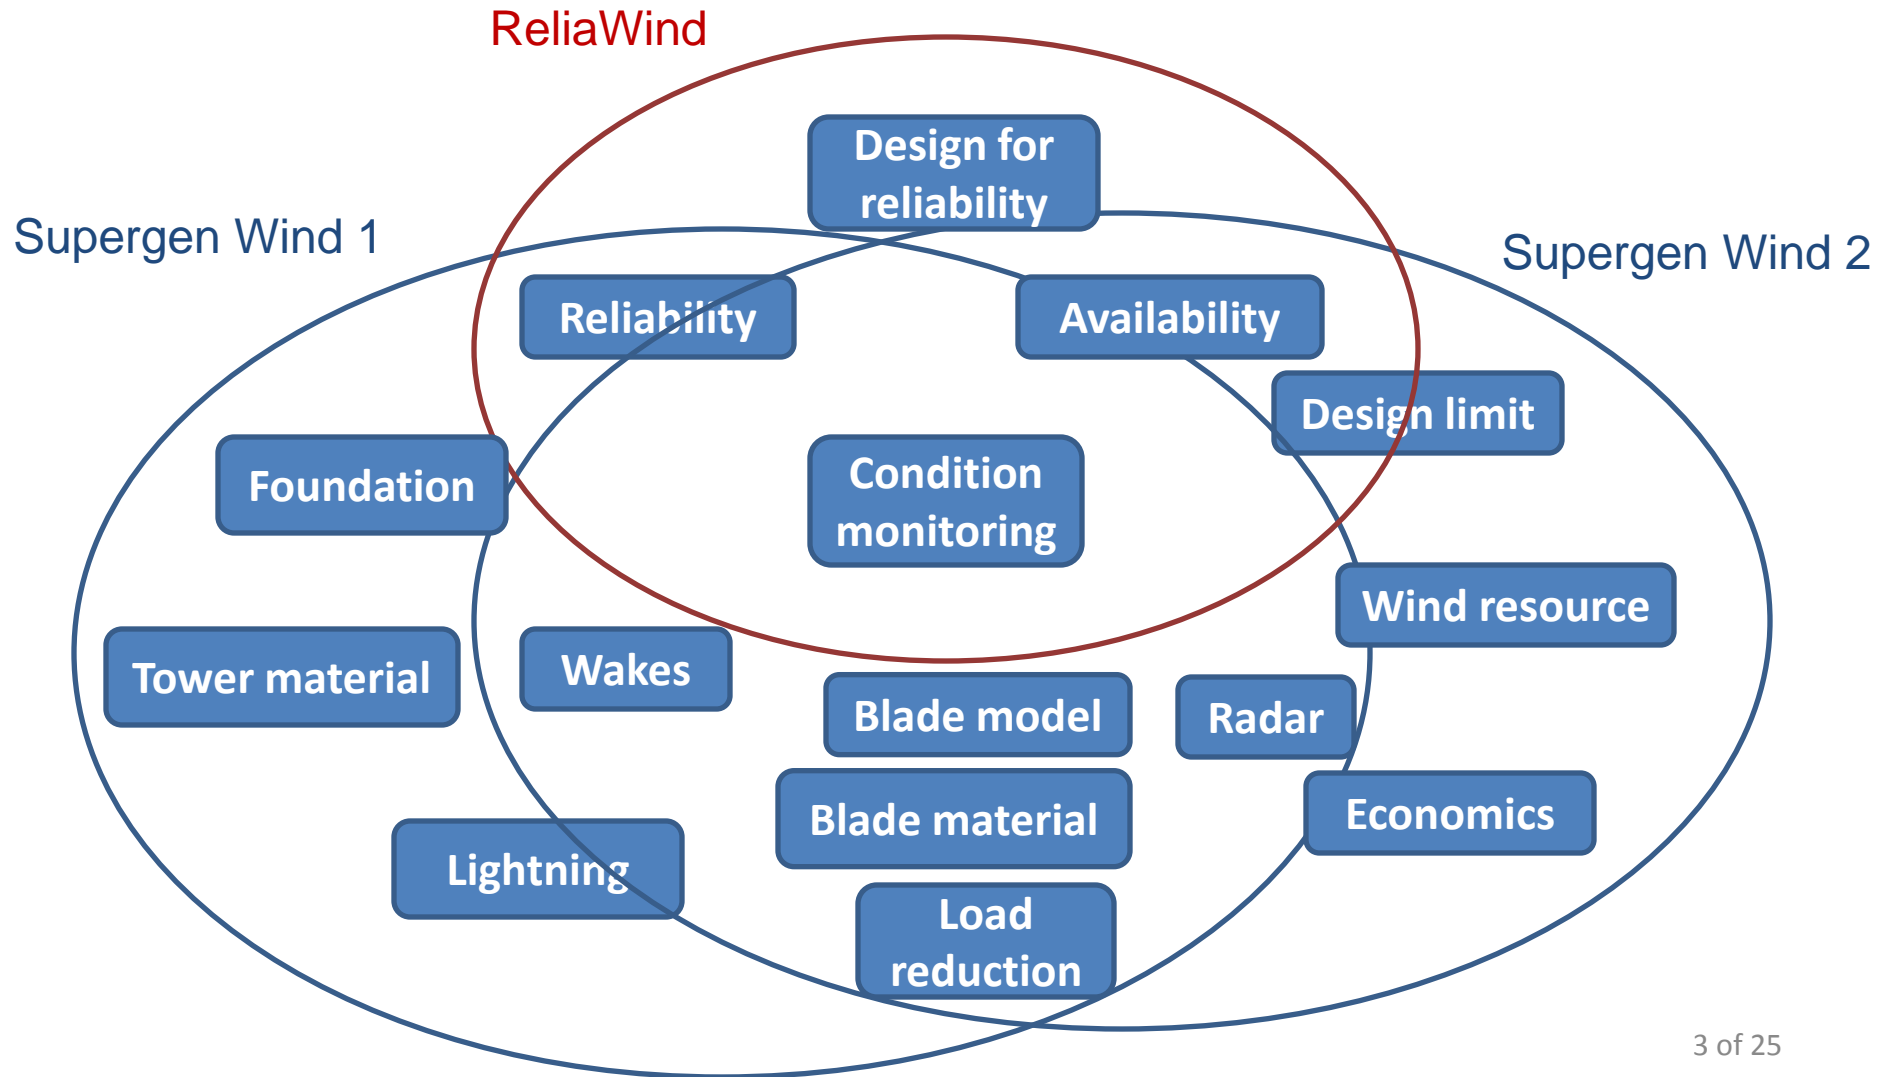

- 8 Industrial Partners, 2 Academic Partners representing full WT value chain.
- To achieve European technological leadership in WT reliability, availability & maintenance.
- A fast track (36-months) project: start March 2008, finish March 2011.
- Strongly results-oriented, 81 deliverables, 20 delivered to date.
- Budget of €7,7M.
- Proposed EC contribution of a maximum of €5,1M.

## ■ Supergen Wind, UK EPSRC, Phase 1

- 8 Academic Partners, 8 Industrial Partners
- 48-month project: start March 2006, finish March 2010, £2.55M budget.
- To undertake research to improve the cost effective reliability & availability of existing and future large scale wind turbine systems in the UK.
- 35 Deliverables completed on time.

## ■ Supergen Wind, UK EPSRC, Phase 2

- 6 Academic Partners, 10 Industrial Partners
- 48-month project: start March 2010, finish March 2014, £4.85M budget.
- To undertake research to achieve an integrated, cost-effective, reliable & available Offshore Wind Power Station
- 30 Deliverables.

# ReliaWind

# Project Architecture

**Integration of  
Technologies,  
Methods and  
Applications**

**Supervisory control,  
diagnosis-prognosis algorithms,  
action logic & communications**

**Sensors, measurements, signals  
conditioning and processing**

**System, component and parts Reliability Engineering**

**Management & Coordination**

# Quantitative Objectives

- Mean Time Between Failures (MTBF):
  - Offshore: 20% increase
  - Onshore: 10% increase
- Mean Time to Repair (MTTR)
  - Offshore: 50% reduction
  - Onshore: 20% reduction
- Operational Availability (%)
  - Offshore availability: 97-98%, (currently 85-90%)
  - Onshore availability: 98-99% (currently 97-98%)
- Cost of Energy (CoE): < 0.04 €/kWh

# Project Consortium

**Research  
Institutions:**  
SZTAKI  
Durham

**Components  
Manufacturers:**  
LM Glasfiber  
Hansen  
ABB  
SKF  
Garrad Hassan

**WT  
Manufacturers:**  
Alstom Wind  
Power  
Gamesa

**Wind Farm  
Owners**

**Reliability Software Firm**  
Relex PTC

# Partner Responsibility

<b>System / Component</b>	<b>Responsible Partner</b>
Pitch System (Electrical & Hydraulic)	Alstom Wind Power– Gamesa
Blades	LM Glasfiber
Blade Bearings	SKF
Gearbox	Hansen & SKF
Hub, Main shaft, Main frame, Rear structure, Cover, Tower, Foundation, Yaw system	Alstom Wind Power
Converter, Transformer, Switch Gear, Generator	ABB
Control	Garrad Hassan - Gamesa
Auxiliary Equipment	Gamesa
Wind Farm Systems	Gamesa

# Work Programme

Objectives and associated work plan		WP-1	WP-2	WP-3	WP-4	WP-5	WP-6
Objective 1	To identify Critical Failures and Components	Field Reliability Analysis					
Objective 2	To understand Failures and Their Mechanisms		Design for Reliability				
Objective 3	To define the Architecture of a Health Monitoring System			Algorithms			
Objective 4	To demonstrate the Principles of the Project Findings				Applications		
Objective 5	To train internal and external partners					Training	
Objective 6	To disseminate the new knowledge through Conferences, Workshops, Web Site and Media						Dissemination

# Dissemination

- Published 7 Journal Papers, 20 Conference Papers
- Organised 9 Training Seminars
- High profile at EWEC 2010
- <http://www.reliawind.eu/>

# Supergen Wind 1

# Academic partners

Research Hub

Finance Hub

Manchester Metropolitan University

Science & Technology Facilities Council  
Rutherford Appleton Laboratory

UNIVERSITY OF SURREY

Imperial College London

# Industrial partners

# Research Programme

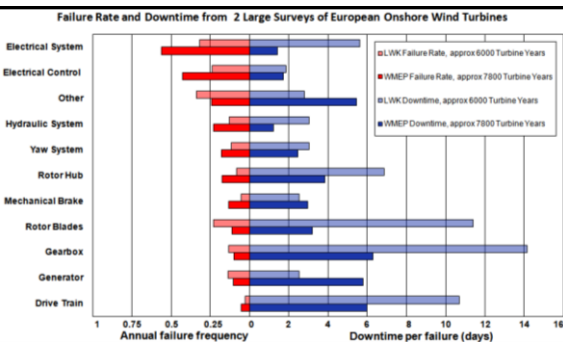

- Theme W: *Base-lining Turbine Performance*
- Theme X: *Condition Monitoring*
- Theme Y: *Loads & Materials*
- Theme Z: *Environmental Issues*

# Theme W Achievements

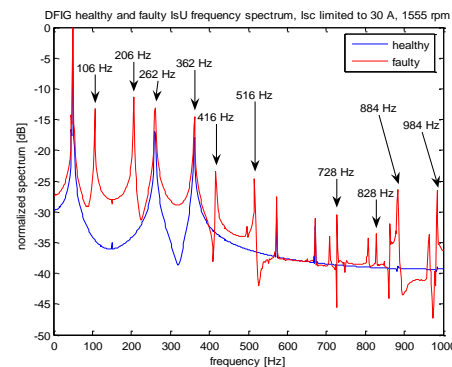

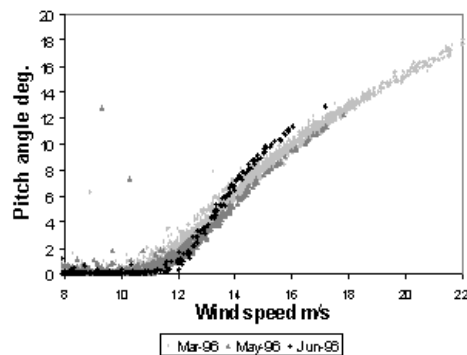

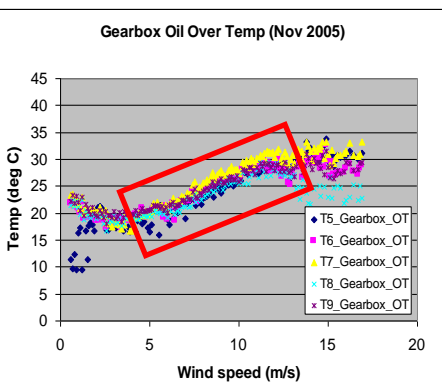

- Produced the most comprehensive analysis of turbine sub-system failures
- Wind turbine and wind farm availability models developed and effect of different parameters on failure rates studied
- Comprehensive wind tunnel measurements made of multiple turbine wakes for different array configurations
- CFD models of forest canopies validated against wind tunnel scale measurements

# Theme X Achievements

- Identified how condition monitoring can improve turbine availability
- Developed of a detailed DFIG analytic model capable of modelling healthy and faulty states
- State of the art Condition Monitoring Test Rigs built and operational
- Detection of faults on the test rig using electrical signals
- Developed and demonstrated algorithms for tracking fault frequencies in variable speed turbines

# Theme Y Achievements

- Development of a two wake interaction model
- Investigated and tested new composite materials to improve blade strength and durability (hybrid veil and fibre toughened resins for shear web integration)
- Fully parametric blade model (including novel materials, quasi-static aerodynamics, certification test loads)
- Active regulation of tower and rotor loads with reductions up to 50%.

# Theme Z Achievements

- New methods have been developed to support prediction and reduction of scour around monopiles
- The issues of lightning protection and radar cross-section have been addressed together for the first time
- Computationally efficient models of turbine and array have been developed for investigation of above
- New materials to improve former and reduce latter have been developed

Recent Modelling Results

FEA Modelling - 2

Field Enhancement at Blades and Windvane

Mobile Bed

# People Training

- 3 PhDs and 2 RAs are now working in wind related companies, Garrad Hassan(2), NaREC, Samtech, MLS
- 3 PhDs awaiting viva or preparing theses.
- 7 RAs and 7 PhDs (include 4 DTA) receiving training;
- Training events included
  - Attendance at two EAWE PhD Workshops (Pamplona 2007, Magdeburg 2008) in Europe and one hosted in UK (Durham 2009)
  - Three Supergen Wind Training Seminars held.
  - Consortium researchers participated in the UKERC Conference, Oxford UK, May 2008.
  - Training by host institutions in research and communication skills.

# Dissemination

- Published 24 Journal, 58 Conference papers
- Organised 8 Workshops, including 3 training seminars
- High profile at EWEC
  - EWEC2008: 2 Oral Presentations + 4 Posters Including Best Poster
  - EWEC2009: 3 Oral Presentations + 6 Poster Presentations
  - EWEC2010: 3 Oral Presentations + 7 Poster Presentations
- <http://www.supergen-wind.org.uk>

# International Connectivity

- Members of European Wind Energy Academy
  - Tavner is Vice-President 2009-2010
- Members of various European projects
  - Loughborough: EAWC Marie Curie WAUDIT Initial Training Network
  - Durham: EU FP7 RELIAWIND
- Members of EPSRC UK-China Energy Research Collaboration
  - Durham: Future Renewable Energy Conversion Systems & Networks Consortium
  - Strathclyde: Sustainable Electric Power Supply Consortium
- Participation in EU Wind Technology Platform (Strathclyde)
- Associate partner NOWITECH Norwegian Research Centre for Offshore Wind Technology (Strathclyde)
- Participation in EERA Wind Energy Initiative (Strathclyde)

# Supergen Wind 2

# Research Programme

**Theme 1 The Farm**

**Theme 2 The Turbine**

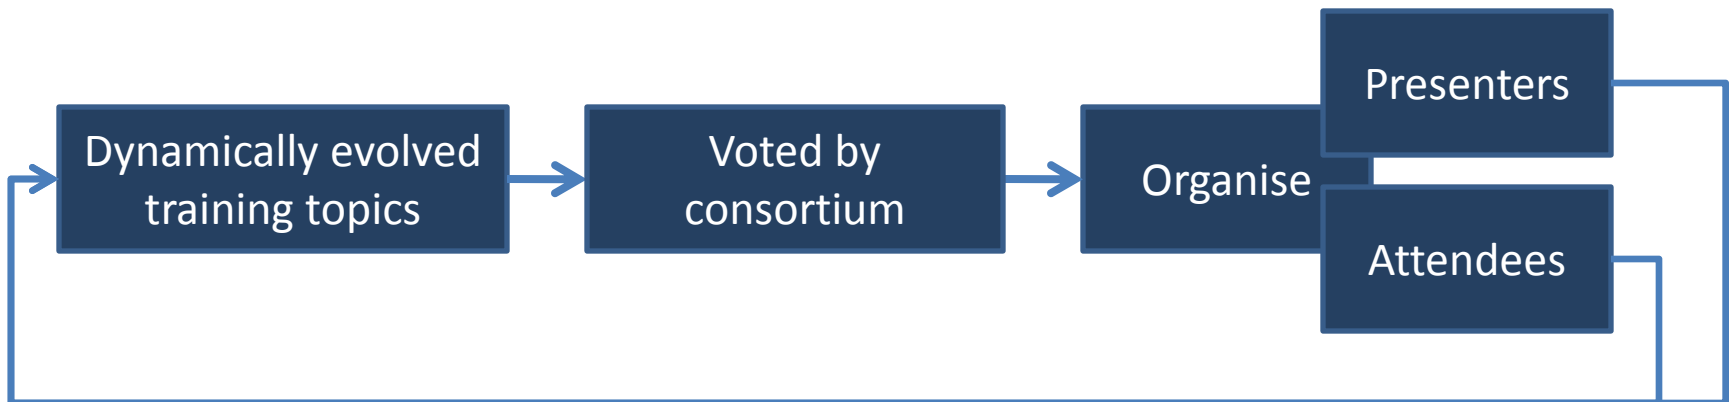

**Theme 3 The Connection**

**Theme 4 The wind farm as a power station**

# Training Scheme

- The Scheme will function not only for training, but as a forum for RAs and students to communicate and develop.
- Requirements based.
- Two days events, every six months.

**Thank you**  
**Side Event is an opportunity**  
**for you to see the outcomes**  
**of these two important projects**
