

Rotos 360 Press release for the EWEA OFFSHORE 2015 exhibition

Rotos 360 are pleased to announce that they will be exhibiting at the EWEA OFFSHORE 2015 in Copenhagen from March 10<sup>th</sup> to 12<sup>th</sup> where they will be meeting potential clients to explain their solutions for inspection and repairs of near shore, mid shore and far offshore wind turbine blades.

Rotos 360 have a turnkey solution providing both the equipment and manpower for inspections and repairs along with the specialised vessels required for the deployment of their platforms, workers and equipment. For far offshore wind farms the vessel also accommodates all the personnel and equipment plus provides a walk to work system for safe transfers in higher sea states.

Rotos 360's blade inspections and repairs can be carried out 24 hours a day using two 12 hour shifts which doubles productivity. To further increase productivity repairs can be conducted for our clients using the very latest Gurit RENUVO™ Ultra Violet cure repair system. This considerably reduces the cure time of the repairs from many hours to just a few minutes and can be used at temperatures down to 5°C rather than 15°C for other repair systems and also does away with the need for using heater blankets.

The Rotos 360 team will be at hand to answer any questions of how we can help our clients keep their offshore blades working at maximum productivity and will have simulated repair samples to show any interested parties how we utilise the ease and cleanliness of RENUVO™ products within our repair systems to demonstrate to any interested parties.
